## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites that the photoresist is positive or negative. This does not provide a further limitation of claim 1 since a photoresist must be either positive or negative.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Dai (US Patent 5,882,996).

Dai teaches a dual damascene method in column 6, line 13 to column 7, line 55 and Figures 3a-3l.

Dai teaches that a first photoresist 150 is applied which can be positive (column 6, line 19) and between 0.4-0.9 microns thick (column 6, line 24). An antireflective coating 160 is then formed on the first photoresist layer. The ARC is 300 to 700 angstroms thick (column 6, line 28). A second layer of photoresist 170 is applied which can be negative or positive and 0.4-0.9 microns thick. This forms the photoresist sandwich (figure 3c). The second photoresist layer is exposed and developed to selectively remove the photoresist and underlying ARC (column 6, lines 46-52). The first photoresist layer is then exposed and developed. The substrate is then etched.
